Automate data collection by connecting legacy devices

SKALA HUB

You don't need a new factory or a complete retrofit to take advantage of the promise of Industrial IoT. SKALA Hub makes virtually any device smart.

Connect and start collecting real-time data from legacy devices, including checkweighers, moisture balances, and temperature probes.

Any device, any manufacturer

Most software makes you collect—and manually input—your data. SKALA Hub is the missing piece. It automates data collection. That doesn't just save time. It mistake proofs your data. SKALA automatically collects data from pH meters, moisture analyzers, NIR spectrometers, color analyzers, viscometers, RH sensors, salt analyzers, temperature sensors, oxygen analyzers, balances, check-weighers, metal detectors, and more. Request a compatibility check on any device.

Make every tech your best tech

Laminated sheets taped to the wall are only so effective. SKALA Hub uses directed workflow to make sure readings are set up and started correctly. After that, SKALA takes care of recording the data, eliminating errors and improving efficiency.

Features

- Creates digital-quality records directly from the instruments in your lab.
- Designed to fit the workflow of a food quality lab.
- Tag samples with information about what batch is being measured and by whom
- Any instrument with a serial data port can be connected to one of SKALA's seven data ports
- 7-inch touch screen
- Menus can be used even when hands are wet or gloved
- Built rugged to withstand normal lab conditions

Specifications

Screen	7-inch diagonal, capacitive touch
Base dimensions	8x13 inches
Connection ports	7
Security	https bank-level security

Support

Have a question or problem? Our support team can help.

We manufacture, test, calibrate, and repair every instrument in house. Our scientists and technicians use the instruments every day in our product testing lab. No matter what your question is, we have someone who can help you answer it.
